## VANNI SURF-ING: the metal surface takes on a host of amazing finishes

Surface treatments for metal frames can be almost infinitely varied, a most unusual source of inspiration.

To **VANNI** this is cutting-edge innovation: it entails rummaging in areas a million miles from eyewear tradition, with more than a pinch of experimental daring.

**Surf-ing** contains a hint of cocky self-assurance. We propose 4 diametrically different finishes: a smooth shimmering satin front; or rough natural-feeling mock-rock in 3-D colouring – which is a first-ever in eyewear, using the paint automobiles protects its cylinder heads with, though in the brightest **VANNI** colours.

Then there is a luminescent night-shine colour finish in mother-of-pearl, bronze or night sky blue.

Lastly, freeze is a milled surface like metal coated in ice; this comes in 4 models designed for the more petite female face, chic sophistication.

**Surf-ing** is for prescription or sun-wear (in a special Stardust finishing). Temples all use **VANNI**'s comfortable patented Mech-Flex system.

Styles and shapes are unisex tending to feminine.
